About This Game

Six candidates will confront each other in a galactic electoral campaign in order to become the supreme chancellor. In the Galactic Campaign Game, you play one of the six candidates.

With strategy, you must travel from planet to planet and answer to the wishes of the population. During the press conference, the promises made to a planet are going to influence 5 gauges (Technology, Security, Spirituality, Economy, Environment). If your answers are correct, you will win the voices needed to become the chancellor. On the other hand, a communication campaign will help you to win a planet.

You will also have 4 advisers to help you during the campaign. Finally, do not forget to master your campaign budget.

How far are you willing to go to win?

Title: Galactic Campaign
Genre: Casual
Developer:

English,French

I really like this game and I enjoy the concept of the game. Though i was very reserved with my money in the game you really gotta play around your money and how you handle questions. The graphics are not the greatest, but I guess that is not what is expected from such a game. The colors match well with the the theme and the sound effects are great. I know I will be playing more of this game, even though I will become last in this political race! A+
